## **Curriculum Summary**

Sergi Valverde, Ph.D., is a CSIC tenured scientist at the Institute of Evolutionary Biology (IBE), head of the Evolution of Networks Laboratory, and a member of the European Center for Living Technology (ECLT). The Universitat Politècnica de Catalunya (UPC) granted him a Ph.D. in Applied Physics after he had earned a Bachelor of Science in Informatics Engineering. Over the course of a number of post-doctoral positions, he has focused on complex networks and mathematical biology, with a particular emphasis on the theoretical elements of evolutionary theory and ecology. More than 70 peer-reviewed articles and more than 60 public lectures in network science, ecological networks, collective intelligence, and technological and cultural evolution support this research endeavor. Valverde, an active member of the scientific community, serves on the board of the Catalan network for the study of complex systems (Complexitat.cat) and was elected to the Council of the Complex Systems Society (CSS) for 2016-2018. He participated in the 3 main IST FET FP6 projects in Complex Systems (PACE, ECAgents, and DELIS) and directed 3 national projects on technological evolution funded by the Spanish Ministry of Economy and Competitiveness.

## **Software**

**Title:** Netlab

**Description:** Software for the analysis, modelling and visualisation of complex networks. This toolkit has been reused in many Complex Systems Lab publications during the last decade. Renderings produced with Netlab have been featured in popular media like New York Times Magazine (March 12th, 2006) and a special Nature issue on Ecological Complexity (vol. 442 no. 7100, July 20th 2006). See: <http://www.nature.com/nature/journal/v442/n7100/edsumm/e060720-01.html>

**Title:** Netlab Online

**Description:** A collection of online applications specifically developed for my courses on Complex Networks. Please check our website: <https://sites.google.com/site/introcomplexnetworks/>

**Title:** BiMat

**Description:** Open-source MATLAB library whose main function is the analysis of modularity and nestedness in bipartite ecological networks. BiMat has been developed in collaboration with Cesar Flores, Timothee Poisot and Joshua Weitz. Its main features include: modularity and nestedness calculation, diversity calculation using Shannon and Simpson's indexes, different null models for the creation of random bipartite networks, and statistics of the network. Please check our website: <http://bimat.github.io>

**Title:** Chimera

**Description:** Simulation platform for “programmable life systems” that combines evolutionary dynamics with realistic physical embodiment. Our system offers to possibility to design new functions on top of a realistic computational model that takes into account emergent properties. This tool can be adapted to simulate micro-fluidics experiments and testing hypothesis of tumour growth and angiogenesis.

**Title:** ProRally 2002

**Company:** Ubisoft Entertainment

**Description:** Racing videogame created by Ubisoft for the Playstation 2 and Nintendo Game Cube consoles. My role in these projects was to design and develop the physics engine and also to supervise the overall software architecture according to the best engineering practices.

**Title:** Red1 (El Periodico de Catalunya) **Company:** Ediciones Primera Plana.

**Description:** Desktop publishing software used in the production of the newspaper 'El Periodico de Catalunya). Automatic machine translation used in the production of the catalan version of the newspaper.
